

UPR Invoicing & Financials

Employee Guide

How we build invoices, send them to QuickBooks, take payments, and track collections inside the UPR app.

1. The Big Picture

JOB → BUILD INVOICE → SEND TO QUICKBOOKS → GET PAID → COLLECTIONS
(the work) (line items in UPR) (real QBO invoice) (payments sync to QBO) (track A/R)

- **One invoice per job — and a job is one division.** A claim with Mitigation and Reconstruction is two jobs = two invoices. Insurance pays each category on a separate check, so each check matches its own invoice.
- **Invoices are built line by line.** On the invoice editor each line carries a QuickBooks **Item + Class**, a description, and quantity × rate. The invoice total adds itself up — there's no single lump-sum box.
- **“Invoiced” means it’s in QuickBooks.** A new invoice starts as a **draft** in UPR. You add the lines, then click **Send to QuickBooks** — now it's real, the balance clock starts, and it appears in Collections.
- **Everything flows one way: UPR → QuickBooks.** QuickBooks is the official record; UPR is where you build, send, take payment, and chase the balance. Nobody edits invoices or payments directly in QuickBooks.
- **Payments you record in UPR post to QuickBooks automatically**, applied against the invoice.
- **The financial numbers come straight from your invoices** — once a job has a sent invoice, its Invoiced / Balance update on their own.

2. Who Can Do What

- **Build invoices, send to QuickBooks, record payments, manage Payment Settings:** Admins and Managers.
- **Everyone else:** can see the info (read-only). Edit buttons simply won't show.
- Billing is also behind the **Billing** feature switch — if it's off, the billing areas are hidden for everyone.

3. Start an Invoice

Two ways to begin — both open the same invoice editor. **One invoice per job:** if the job already has one, you land right back on it (never a duplicate).

- **“+ New invoice” button** — on a **Customer's page** (top) or on the **Collections** screen. Pick the job to bill and it opens the editor.
- **From the claim or customer** — open the claim's **Invoices & Payments** panel (or a customer's **Financial** tab) and click **Create invoice** on the job's row.

4. Build & Send to QuickBooks

Where: the invoice editor (the page that opens after you start an invoice).

- 1 Click **+ Add line**. Choose the QuickBooks **Item** and **Class**, type a **description**, then **quantity** and **rate**. The line amount and invoice **Total** fill in automatically.
- 2 Add as many lines as the job needs. **Line edits save by themselves** — no save button.
- 3 When the total is right, click **Send to QuickBooks**. Status goes **Draft** → **Sent** with a green **QuickBooks #** — now it's officially invoiced and shows in Collections.
- 4 Need to change it after sending? Edit the lines and click **Update in QuickBooks** to re-push.
- 5 The **Item** and **Class** lists come live from QuickBooks, so QuickBooks must be connected.

Fixing mistakes: A red **Error** badge? Hover to read why (usually the customer isn't linked in QuickBooks yet) — fix it and click **Send / Update** again. Sent the wrong thing? Edit the lines and **Update**, or use **Remove from QuickBooks** to pull it out. An unsent draft can be removed with **Delete draft**.

5. Get Paid

Where: the claim's **Invoices & Payments** panel, a customer's **Financial** tab, or **Collections** → open the claim.

- 1 **A payment comes in?** Click **+ Record payment**, enter the amount and date, choose who paid (insurance / homeowner / other) and the method, add a reference, and save.
- 2 The payment **posts to QuickBooks automatically**, applied to that invoice — a green ✓ **QB** appears. (A **! QB** means the invoice isn't in QuickBooks yet — send it first.)
- 3 **Collected** and **Balance** update right away; **Invoiced** doesn't change (it only reflects the invoice itself).

Card payments (Stripe pay-link): On the invoice editor click **Create pay link** to make a secure Stripe link for the balance, then send it to the customer. When they pay by card, the payment is recorded and synced to QuickBooks automatically — including the processing fee, which is booked for you. *Available once Stripe is connected (Collections → Payment Settings).*

6. Collections & the Numbers

Collections in the menu has two tabs: **A/R • Outstanding** (totals, aging buckets, overdue worklist) and **Payments** (cash-in history). Click any row to open that claim's A/R workspace. The same detail lives on each claim's **Invoices & Payments** panel and each customer's **Financial** tab.

Term	What it means
Invoiced	Total of the invoice's line items, once it's sent to QuickBooks. What we've officially billed.
Collected	Payments you've recorded as received (they also post to QuickBooks).
Balance	Invoiced – Collected. What's still owed.

Aging	How overdue the balance is vs. the due date — Current, 1–30, 31–60, 61–90, 90+ days.
Deductible Owed	The customer's deductible not yet collected.
Insurance A/R	What insurance still owes after the deductible.

Rule of thumb: **Invoiced – Collected = Balance**. If the Balance looks wrong, it's almost always an invoice that wasn't sent, or a payment that wasn't recorded.

7. Good Practices

DO

- One invoice per division (Mitigation and Reconstruction each get their own).
- Build the lines with the right **Item + Class** so the numbers land in the correct QuickBooks buckets.
- Only **Send to QuickBooks** when the total is final — sending creates the real bill and starts the A/R clock. Not ready? Leave it a draft.
- Record payments the day they arrive, with the correct payer and method.
- Use the card **pay link** for deductibles / out-of-pocket — it reconciles itself.
- Mark the deductible received as soon as it's collected.

DON'T

- Don't try to make a second invoice for the same job — open the existing one and edit its lines.
- Don't send a guess. A sent invoice is a real bill in QuickBooks.
- Don't enter invoices or payments directly in QuickBooks — always do it in UPR so the two stay in sync.
- Don't "Remove from QuickBooks" unless you mean to pull it back to correct and re-send.

8. FAQ / Troubleshooting

Q: How do I take a card payment from a customer?

Open the invoice editor and click **Create pay link** — a secure Stripe link for the balance. Send it; when they pay, the payment is recorded and synced to QuickBooks automatically. (Available once Stripe is connected in Payment Settings.)

Q: I recorded a payment — did it reach QuickBooks?

Yes, automatically — as long as the invoice was already sent to QuickBooks. A green ✓ QB shows next to it. A ! QB means the invoice isn't in QuickBooks yet; send it first.

Q: The Collections balance still shows an old number.

That job probably predates this system. Older jobs keep their existing numbers and don't need re-invoicing. Only jobs with a freshly sent invoice switch to the new figures.

Q: I got a red "Error" badge.

Hover it to see why — usually the customer needs to be linked to a QuickBooks customer first. Fix that, then Send / Update to QuickBooks again.

Q: Can I undo a send?

Yes — on the invoice editor, Remove from QuickBooks pulls it out entirely. Just fixing line items? Edit the lines and click Update in QuickBooks.

Q: Why don't I see the Item / Class dropdowns?

They load live from QuickBooks, so QuickBooks must be connected (Dev Tools → Integrations).

Quick Cheat-Sheet

To bill a job: + *New invoice* (or Claim → Invoices & Payments → *Create invoice*) → add line items (Item + Class, qty × rate) → *Send to QuickBooks* (green QuickBooks # = done).

To collect: Collections → open claim → + *Record payment* (it posts to QuickBooks) — or open the invoice and *Create pay link* for a card payment.
