

UPR Invoicing & Financials

Employee Guide

How we create invoices, push them to QuickBooks, and track collections inside the UPR app.

1. The Big Picture

JOB → CREATE INVOICE → SYNCs TO QUICKBOOKS → COLLECTIONS
(the work) (draft in UPR) (real QBO invoice) (get paid + track)

- **One invoice per job — and a job is one division.** A claim with Mitigation and Reconstruction is two jobs = two invoices. Insurance pays each category on a separate check, so each check matches its own invoice.
- **“Invoiced” means it’s in QuickBooks.** A new invoice starts as a **draft** (\$0, local). The moment you enter an amount it **syncs to QuickBooks automatically** — then it’s real, the balance “clock” starts, and it appears in Collections.
- **QuickBooks is the official record. UPR is where you build the invoice and chase payment.**
- **The financial numbers come straight from your invoices.** Once a job has a synced invoice, its Invoiced / Balance update automatically — you don’t type them by hand.

2. Who Can Do What

- **Create & price invoices (they auto-sync to QuickBooks), log payments:** Admins, Managers, Project Managers, Supervisors.
- **Everyone else:** can see the info (read-only). Edit buttons simply won’t show.

3. Create & Send an Invoice

Where: Open the **Claim**, then find the **Billing** section. (Desktop: the “Billing” card near the bottom. Phone: tap **Billing** to expand.)

- 1 Open the claim (from Claims, or a job’s “View Job”).
- 2 Go to **Billing**. You’ll see one row per job/division, e.g. “*Reconstruction · J-1042*”.
- 3 Click **Create invoice**. The row shows a draft with an invoice number.
- 4 Type the amount and click away (or press Enter). **It saves and syncs to QuickBooks automatically** — no buttons to press.
- 5 Watch the status chip go **Syncing...** → green **QuickBooks #...** That means it’s officially invoiced.
- 6 Need to change it later? Just edit the amount — it re-syncs to QuickBooks instantly.

Fixing mistakes: A red **Error** badge? Hover to read why (usually the customer isn’t linked in QuickBooks yet) — fix it and re-enter the amount to retry. Wrong amount? Just retype it; the invoice re-syncs automatically. To pull it out of QuickBooks entirely, use **Remove from QuickBooks**.

4. Track Payments & Collections

Where: Collections in the main menu → click the claim.

- 1 A payment comes in?** Click + **Log Payment**, choose the source (insurance, deductible, homeowner/out-of-pocket), enter amount and date, and save. The Balance updates automatically.
- 2 Deductible collected?** Click the amber “■ \$X owed” button by *Deductible* — it flips to green “✓ Rcvd”.
- 3 Update the A/R status:** Open → Invoiced → Partial → Paid (or Disputed / Written Off).
- 4 Log every follow-up with Notes** — this builds the Collections Log so anyone can pick up where you left off.

5. Reading the Numbers

Term	What it means
Estimated	What we expected the job to be worth early on.
Approved	What the carrier approved.
Invoiced	Total synced to QuickBooks. What we've officially billed.
Collected	Payments you've logged as received.
Balance	Invoiced – Collected. What's still owed.
Deductible Owed	The customer's deductible not yet collected.
Insurance A/R	What insurance still owes after the deductible.

Rule of thumb: **Invoiced – Collected = Balance**. If the Balance looks wrong, it's almost always an invoice with no amount entered yet, or a payment that wasn't logged.

6. Good Practices

DO

- One invoice per division (Mitigation and Reconstruction each get their own).
- Enter the amount only when it's final — saving an amount creates the real QuickBooks invoice and starts the A/R clock. Not sure yet? Leave the draft at \$0.
- Double-check the amount; confirm the green badge appears.
- Log payments the day they arrive, with the correct source.
- Mark the deductible received as soon as it's collected.
- Keep the Collections Log current — note every follow-up.

DON'T

- Don't try to make several invoices for the same job — create it once and edit the amount.
- Don't enter a guess. Saving an amount sends a real bill to QuickBooks; leave the draft at \$0 until you know the number.
- Don't hand-edit the old Revenue numbers on a job that already has a real invoice — the invoice is the source of truth.
- Don't "Remove from QuickBooks" just to fix an amount — edit the amount instead (it re-syncs). Only remove it if it shouldn't be in QuickBooks at all.

7. FAQ / Troubleshooting

Q: The Collections balance still shows an old number.

That job probably predates this system. Older jobs keep their existing numbers and don't need re-invoicing. Only jobs with a freshly pushed invoice switch to the new figures.

Q: I logged a payment but Invoiced didn't change.

Correct — logging a payment changes Collected and Balance, never Invoiced. Invoiced only changes when you push or adjust the invoice itself.

Q: Does QuickBooks payment info flow back automatically?

Not yet. For now, log payments by hand in Collections. Automatic QuickBooks payment sync is planned for a later update.

Q: I got a red "Error" badge.

Hover it to see why — usually the contact needs to be linked to a QuickBooks customer first. Fix that, then re-enter the amount to retry.

Q: Can I undo a push?

Yes — Remove from QuickBooks pulls it out of QuickBooks entirely. (Just fixing an amount? You don't need to remove it — editing the amount re-syncs automatically.)

8. Quick Cheat-Sheet

To bill a job: Claim → Billing → *Create invoice* → type the amount → it saves & syncs to QuickBooks automatically (green badge = done).

To collect: Collections → open claim → + *Log Payment* (and mark the deductible Rcvd) → update A/R status → add a Notes entry.
